PROFESSIONAL SUMMARY

Business Intelligence and Analytics professional with hands-on project experience turning raw, messy data into clean datasets, structured SQL analyses, and self-service dashboards using MySQL, Python, Excel, and Power BI. Comfortable writing complex queries, cleaning large datasets, and building visualizations that answer business questions. Looking to bring strong analytical rigor, ownership, and communication skills to Amazon's Flex Analytics team as a Business Intelligence Engineer, supporting scaled, automated reporting for forecasting and pricing.

SKILLS

Technical: SQL (MySQL), Python, Microsoft Excel (Advanced), Power BI, Data Visualization, Data Cleaning & Wrangling, Dashboard Development, Exploratory Data Analysis

Business & Analytical: Ad-hoc Analysis, Business Reporting, Data-Driven Decision Making, Requirements Gathering

Soft Skills: Leadership, Problem-Solving, Communication, Stakeholder Collaboration

PROJECTS

Layoffs Dataset Cleaning & Exploratory Analysis

MySQL, SQL

- Cleaned and standardized a real-world layoffs dataset in MySQL (Kaggle, 2,361 raw records → 1,995 analysis-ready records, 9 columns, Mar 2020–Mar 2023): removed duplicate records, standardized inconsistent industry and country name formats, converted date fields to proper DATE type, and removed 361 records missing key layoff metrics.
- Wrote structured SQL queries – including window functions (ROW_NUMBER, DENSE_RANK, rolling SUM over CTEs), joins, and aggregations – to analyze layoff trends across 1,633 companies in 51 countries by industry, country, stage, and time period.
- Surfaced key trends: 2022 accounted for ~42% of total layoffs in the dataset, Consumer and Retail were the hardest-hit industries, and Google's 12,000-person layoff (Jan 2023) was the single largest reported event.

Python Programming Fundamentals

Python

- Built four Python programs applying core data structures and control flow – a to-do list manager, a student grade tracker, an inventory tracker, and a feedback-keyword counter – modeling common list-based use cases such as task tracking, inventory management, and basic text analysis.
- Implemented dynamic list operations (add/remove items, membership checks) and aggregate calculations using built-in functions (sum(), max(), min(), len()) to compute metrics such as averages and highest/lowest values.

Super Sales Dashboard

Power BI, Excel

- Developed an interactive sales dashboard in Power BI to analyze sales performance across regions, categories, and time periods.
- Created KPI cards, trend charts, and interactive slicers to monitor sales, revenue, profit, and regional performance.
- Enabled non-technical stakeholders to explore the data independently, reducing reliance on manual, ad-hoc reporting.

EDUCATION

Bachelor of Business Administration

2026

Bengaluru City University, Bengaluru
